

## Lab 2 - Unprotected admin functionality with unpredictable URL

Ahmed Khaled Saad Ali

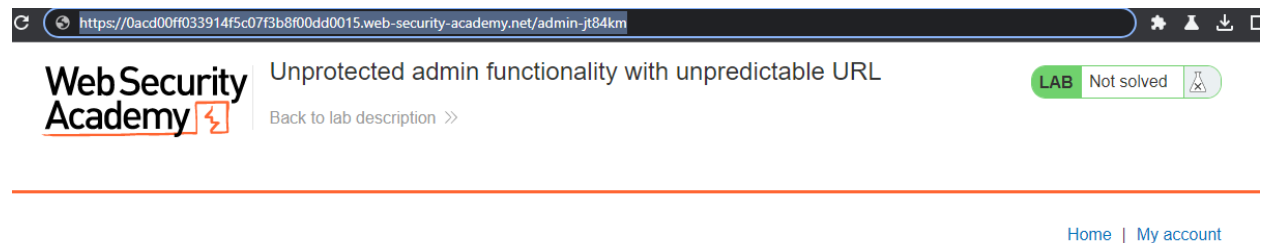

ID:1809799

### Lab Progress & Screenshots:

While we search in the “inspect” of the page and search for ‘admin’ text, we find out that in order to access admin page we just add ‘/admin-jt84km’ to ‘href’ which is the site’s URL.

We add it to the URL above.

Admin panel page is accessed, deleting Carlos and lab is solved.

### Lessons:

- 1) With minimal HTML & JavaScript knowledge we knew about the vulnerability.
- 2) Don't include in your Javascript the direct URL for any user that should be secured: admin, manager,..etc.
